

Veolia – meeting notes after lunch – CPT plan

Just did Rata - want to change to be within 90 days. Check on rata requirement. Just did it on June 3,4,and 6.

Spiking for Chlorine – hexchloroethane – expensive and having problems getting. Hoping to spike 50/50 with calcium chloride. 4.5.5.

9.

Carbon feedrate – enforcement would accept a set rate if extrapolation is off the table.

V would entertain do a test outside the CPT to figure out carbon/mercury ratio. Agree that D/F would need to monitored to.

V needs to figure out as a company what they want to do. Do they want to extrapolate or not?

Discuss further with David O.

1.

Next Steps:

Set up call for Monday with David – extrapolation stuff. Shannon/Charlie

Check rule for OPL requirement

Todd – box write up/explanation

RATA answer and chlorine spike answer

Ash and chlorine feed

Veolia- historical feedrate data. Add 6 months to normal ash and chlorine

Sabrina is going to see if ok to leave out current OPLs.
